

COURSE DATA SHEET

COURSE OVERVIEW

The SilkCentral Test Manager Essentials course consists of instruction and hand-on exercises relating to how application quality can be managed using Micro Focus SilkCentral Test Manager. This course should be viewed in the context of acquiring a good grounding knowledge in using SilkCentral Test Manager to manage your QA assets, execute manual tests and review test results from an end-to-end perspective. This course focuses on the essentials and may be complemented with additional course modules that cover more advanced topics or niche domains such as custom reporting, integration with requirements management tools and automation tools, etc.

Through hands-on exercises, attendees will be able to:

- › Manage user accounts
- › Configure projects
- › Manage test requirements
- › Create test and execution definitions
- › Schedule tests for manual testing
- › Review reports within SCTM

PREREQUISITES

- › Familiarity with a Windows environment
- › Ability to navigate in an Internet or intranet environment
- › Have a basic knowledge of software quality or test management

TOPICS

- › Introduction to SilkCentral Test Manager: Components of SilkCentral Test Manager , Architecture
- › SilkCentral Test Manager Grand Tour: Overview / walkthrough of the core functions
- › Setting the Stage: Defining test requirements for a sample application
- › Defining Requirements: Requirement hierarchies , requirement entry
- › Creating a Test Plan: Create test plan from requirements, requirement coverage, test containers
- › Managing Execution Definitions: Define manual test executions
- › Creating Manual Tests: Manual test design, test libraries, test versions
- › Execution Manual Tests: Manual test client
- › Issue Manager Overview: Creating defects, defect workflow
- › Test Monitoring and Reporting: Activities, overview reports, out-of-the box reports
- › Project Settings: Custom property definition, source control profiles
- › System Administration: Create and manage projects, users, access rights, system settings, licensing
