

COURSE DATA SHEET

COURSE OVERVIEW

The Micro Focus Server Enterprise Edition Administrator workshop consists of intensive instruction and hand-on exercises relating to the administration of the Server Enterprise Edition platform running production applications. This workshop should be viewed in the context of acquiring a good grounding in Server Enterprise Edition Administration, but this will need to be supplemented with additional information and instruction from Micro Focus Professional Services in order to add details of a client's particular environment adhering to their processes and procedures.

After attending this workshop, delegates should be able to:

- Implement and administer the Server Enterprise Edition Environment
- Diagnose Issues
- Monitor System Health

TARGET AUDIENCE

- Administrators/Operators who will be responsible for the implementation and administration of the Micro Focus Server Enterprise Edition production environment.

TOPICS

- Install Micro Focus Server Enterprise Edition
- Server EE Administration Overview
- Server EE Administrator functions: Starting and Stopping Servers, Cloning regions, Dynamic Configuration, Using Import/Export
- Configuring CICS
- Enterprise Server Monitor and Control (ESMAC) Overview: JES, Catalog, Spool, Submitting Jobs
- Working with Databases
- Configuring Fileshare
- Basic ESA Security
- Using the command line
- Diagnostics: Triage, Dumps, Logs, journals etc, Data collection and CTF tracing, Core dump

PREREQUISITES

- For Linux or UNIX target Server EE operating platform environments, a one hour pre-planning meeting is required at least one week in advance to customize the topical coverage and delivery approach for the second day of the training.
- This workshop is targeted at Administrators/Operators who will be responsible for the implementation and administration of the Micro Focus Server Enterprise Edition production environment. Delegates should be currently responsible for operating and administrating mainframe production applications.
- Delegates will require a good understanding of CICS, JCL, SQL and VSAM file handling.
- Delegates should have operating experience working in the target Server EE operating platform environment – Windows, Linux or UNIX.
- Delegates should have experience in Windows, navigating a GUI environment, and using a web browser.
