

COURSE DATA SHEET

COURSE OVERVIEW

SilkTest is a functional automated testing tool with different interfaces for you to create scripts against your application. This course focuses on the Workbench test scripts, and is designed to teach you how to use the VB.NET scripting capabilities of SilkTest. This course is a logical next step after taking the “SilkTest 2010 Workbench” course, which focuses on Visual Tests.

Upon completion of this course, you will:

- › Be able to create new VB.NET test scripts
- › Know how to edit test scripts, add validations and variablizations
- › Be able to create data driven test scripts
- › Know how to apply basic error handling and customized application synchronization
- › Understand underlying SilkTest object models supporting different technologies
- › Be able to script against certain types of custom controls

PREREQUISITES

- › You have taken the SilkTest 2010 Workbench course or have a good understanding of the SilkTest 2010 Workbench interface
- › Experience working in a Windows environment
- › Experience using a web browser and GUI environment
- › Testing web or GUI applications manually or with another automated test tool is preferred
- › Knowledge of testing techniques is helpful
- › Knowledge of structured programming (preferably VB.NET) and scripting techniques is helpful

TOPICS

- › Module 1: Introduction to Test Scripts
- › Module 2: Enhancing Scripts
- › Module 3: Application Interfacing
- › Module 4: Locators
- › Module 5: Application Synchronization
- › Module 6: Error Handling
- › Module 7: Test Object Model
- › Module 8: Custom Controls

COURSE FORMAT / AVAILABILITY

This course is available as a 2 day Instructor Led Training engagement.

INSTRUCTOR LED TRAINING

Duration

- > 2 Days

Format

- > Instructor Led Training
